

**BEFORE THE**  
**WYOMING PUBLIC SERVICE COMMISSION**  
**DIRECT TESTIMONY**  
**OF**  
**MICHAEL E. EASLEY**  
**POWDER RIVER ENERGY CORPORATION**  
**Docket No. 10014-168-CR-16**

1 **Q. Please state your name and address.**

2 A. My name is Michael E. Easley and my business address is Powder River  
3 Energy Corporation, P.O. Box 930, Sundance, WY 82729.

4 **Q. What is your present occupation?**

5 A. I am employed as Chief Executive Officer of Powder River Energy  
6 Corporation (“PRECorp” or “the Cooperative”).

7 **Q. What are your duties as Chief Executive Officer of Powder River**  
8 **Energy Corporation?**

9 A. My duties are to supervise the operations of the Cooperative; to make  
10 recommendations to the Board of Directors with respect to strategy, policy  
11 and to administer the policies adopted by the Board of Directors; to provide  
12 both short-term and long range plans for the operation, construction, and  
13 financing of the Cooperative; to maintain an adequate and suitable work  
14 force; and to keep the Board informed in all aspects of the management of  
15 the Cooperative.

16 **Q. Please state your educational background and professional**  
17 **qualifications.**

18 A. I have a BS degree in Electrical Engineering from Oklahoma State  
19 University and I am a graduate of the Ken Blanchard Executive MBA  
20 program at Grand Canyon University. I am also a graduate of the National  
21 Rural Electric Cooperative Association Management Internship Program at  
22 the University of Nebraska-Lincoln. I have held various positions of  
23 increasing responsibility in the cooperative utility industry and have been  
24 the CEO of PRECorp since October of 2000.

25 **Q. Does Exhibit ME-1 accurately reflect your professional background**  
26 **and qualifications?**

27 A. Yes.

28 **Q. What is the purpose of your testimony?**

29 A. The purpose of my testimony is to provide a high level view of PRECorp's  
30 current operating environment and a historical look back including  
31 information regarding the notable trends and future projections. I will  
32 explain the overall objectives of this rate application, and briefly discuss its  
33 significant elements.

34 **Q. Will PRECorp present additional witnesses?**

35 A. Yes. Mr. David Hedrick of C.H. Guernsey and Company will provide the  
36 detailed technical testimony regarding the Cost of Service Study ("COSS")  
37 and rate analysis that supports this general rate case and objectives stated  
38 above. Mr. Curtis Mock will provide an analysis of key operating ratios that  
39 are requirements of our lenders.

40 **Q. What are the specific objectives of this rate filing?**

41 A. The specific objectives of this rate filing are: (a) increase the system  
42 revenue requirement by approximately \$11.5 million to address a revenue  
43 shortfall; (b) rebase our rates and reset our Cost of Power Adjustment  
44 (“COPA”) to zero; (c) move all rate classes closer to cost of service; (d)  
45 increase the monthly basic charge for several classes to better recover fixed  
46 costs as identified in the Cost of Service Study and increase the per  
47 horsepower charge for the Irrigation class to the same end.

48 **Q. Please explain the guiding criteria used in developing this general rate**  
49 **filing.**

50 A. PRECorp’s mission is to deliver high quality, competitively priced power and  
51 services to our member-owners, while enhancing the quality of life by  
52 providing leadership and service in our communities. This rate filing was  
53 developed with the goal of ensuring PRECorp’s operational and financial  
54 stability in a declining sales environment. This declining sales environment  
55 has led to a revenue shortfall for PRECorp. This shortfall is the driving need  
56 behind this application.

57 **Q. Can you describe PRECorp’s service territory?**

58 A. PRECorp provides electric power to Crook, Weston, Campbell, Johnson  
59 and Sheridan Counties in northeast Wyoming, in addition to a small area of  
60 southern Montana. Our service area includes the bulk of the Powder River  
61 Basin, and our service area in Montana includes two large coal mines,  
62 Decker and Spring Creek.

63 **Q. What has changed in PRECorp's approach to financial management**  
64 **and rates in this application?**

65 A. The events creating PRECorp's revenue shortfall are the product of forces  
66 beyond our control as were the events leading into the CBM boom that  
67 began in early 2000. Historically the PRECorp Board has requested  
68 Commission authority for rates that would produce the minimal financial  
69 ratios required to meet our mortgage requirements. We depended upon  
70 system growth, and our various risk management strategies, to produce or  
71 support margins and ratios in excess of minimum requirements. Also,  
72 PRECorp relied on capital credit retirements from its power supplier Basin  
73 Electric Power Cooperative (BEPC) to augment the Rural Utilities Service  
74 (RUS), Operating TIER (OTIER) ratio, but Basin has been unable to retire  
75 capital credits due to its equity position and financial covenant  
76 requirements. The approach has served us well during times of growth and  
77 is workable for short duration in times of stability. However, this approach  
78 does not work during periods of declining sales, as we are currently  
79 experiencing. In this application, PRECorp is requesting rates that produce  
80 the margin necessary to maintain a mid-level RUS OTIER of 1.5.

81 PRECorp's CFO will provide testimony explaining the importance of this  
82 RUS OTIER level. In the opinion of PRECorp's Board of Directors, this 1.5  
83 RUS OTIER level, along with our other risk management strategies,  
84 provides some room for things to be worse than we would hope without  
85 overreacting to the currently anticipated factors and situation we find  
86 ourselves in.

87 **Q. Please provide a high level view of your current operating**  
88 **environment and compare and contrast it to historical conditions.**

89 A. The best analogy would be to say that PRECorp has gone through a boom  
90 and bust cycle beginning in early 2000 when PRECorp was responding to  
91 the development boom of the Coal Bed Methane (CBM) industry. We  
92 experienced near exponential growth with our load doubling in a 10-year  
93 period.

94 We are currently experiencing a significant downturn with a declining sales  
95 environment and the natural resource extraction industry being stressed by  
96 low commodity prices and increasing regulatory pressures. CBM has been  
97 in decline since 2010 due to competition with other more profitable  
98 production areas in the U.S. and increasingly difficult environmental  
99 regulations in the Powder River Basin (PRB) area. From 2010-2013  
100 PRECorp's overall system sales were kept relatively stable, in spite of  
101 declines in CBM sales, with increasing oil related loads and stable sales to  
102 the coal mine industry. However, CBM declines continued through 2014  
103 and rapidly accelerated and began to impact the entire system in 2015 due  
104 to low global oil prices, continued low gas prices, and market uncertainty  
105 created by the EPA's Clean Power Plan. Please see Exhibit ME-2 for a  
106 comparison of PRECorp's sales since 2000.

107 The impacts that PRECorp is feeling are not isolated and are, in fact, being  
108 seen across Wyoming and beginning to show up in reports issued by the  
109 State of Wyoming. The Economic Summary 3Q2015, prepared by the  
110 Economic Analysis Division, indicates how these factors are impacting the

111 Global, US, and Wyoming economies. This report is included as Exhibit  
112 ME-3. The downturn is not isolated to PRECorp, but the immense energy  
113 reserves in the Powder River Basin, the heart of PRECorp's five-county,  
114 16,200 square mile service territory, place PRECorp at ground zero for  
115 these impacts.

116 **Q. What does PRECorp need to do to manage effectively through this**  
117 **these impacts and the current downturn?**

118 A. The impacts of this bust cycle, or downturn, have been exacerbated by the  
119 combination of low natural gas prices, low oil prices, and a shrinking  
120 demand for Wyoming coal.

121 There are three main things that we need to do in order to manage  
122 effectively through this downturn. First, we must reduce the chance of  
123 revenue loss due to nonpayment of monthly electric bills. Then, we must  
124 ensure that PRECorp remains financially healthy and is able to maintain  
125 appropriate service levels to our member owners. Finally, PRECorp must  
126 step back and look at the bigger picture to assess the entire landscape of  
127 risk and then develop a portfolio of risk management strategies and related  
128 initiatives to manage through this bust cycle.

129 This application is focused on ensuring that PRECorp remains financially  
130 healthy by increasing revenues in order to address a revenue shortfall. In  
131 late 2015, PRECorp was able to secure Commission authority through  
132 revisions to our Security Deposit tariff, thus reducing the chance of revenue  
133 loss due to nonpayment of monthly electric bills. During 2016 we will be  
134 working on a risk management assessment that we anticipate will include

135 the development of various initiatives to manage the risks that we identify  
136 through this process.

137 **Q. Would you explain the major events that occurred in 2015 relating to**  
138 **the downturn you are describing?**

139 A. It is important to recognize that PRECorp's service area includes the vast  
140 majority of coal lands within Wyoming, including the Powder River  
141 Basin. Therefore, any decline in coal or coal bed methane production has  
142 a direct impact on PRECorp's revenues. In 2015 we experienced four  
143 significant events. A CBM Company named Storm Cat Energy ceased  
144 operations and left the system without paying a \$1.1 million power bill.  
145 Alpha Natural Resources, a coal mining company, declared Chapter 11  
146 Bankruptcy and left PRECorp with \$560,000 in pre-petition debt.

147 Additionally, in 2015 two major players, Anadarko and Williams divested  
148 their CBM assets to a new entity called Carbon Creek. Carbon Creek now  
149 owns and operates 703 CBM wells and represents approximately 43% of  
150 sales to the CBM class. Carbon Creek has yet to establish acceptable  
151 credit with PRECorp and is operating with a very large security deposit in  
152 place.

153 In December of 2015, Arch Coal, one of the largest mining operators in the  
154 PRB, missed a debt service payment and entered a 30-day period in which  
155 to cure the default. On January 11, 2016 Arch filed for bankruptcy relief  
156 under Chapter 11.

157 The impacts of these events are not directly addressed in the cost of service  
158 filing, but they certainly are helpful in understanding the stress the energy

159 industry is experiencing and how those stresses can impact PRECorp's  
160 routine operations.

161 **Q. Please describe how PRECorp has attempted to manage through**  
162 **these challenges.**

163 A. During the beginning of the CBM boom PRECorp was focused on managing  
164 risk related to stranded investment and the ultimate retirement of the CBM  
165 facilities that would no longer be considered used and useful. During the  
166 middle portion of the growth cycle we were focused on limiting our member  
167 investment in facilities dedicated to serving CBM loads. As we began to  
168 see the end of the CBM buildout we started to focus on ensuring proper  
169 alignment between our human resources and work load. We began  
170 shedding our contract labor forces and began the process to make sure our  
171 in-house labor forces were properly aligned for the work ahead of us. We  
172 refocused on system maintenance as much of that was deferred during the  
173 boom years due to resource limitations.

174 We expected the CBM decline to be a more linear curve. However, in  
175 reality, it has been non-linear, disruptive and hard to predict. We did not  
176 anticipate the multiple and compounding impacts that we would see related  
177 to the low natural gas prices, the low global oil price and the regulatory  
178 uncertainty created by the build up and approval of the EPA's Clean Power  
179 Plan. This has manifested itself in business failure, bankruptcy, and an  
180 ongoing, and increasingly negative impact to our state and local economy.  
181 The implementation of PRECorp's CBM retirement fund, our CBM risk  
182 management fund, the use of accelerated depreciation, the line share

183 process for our line extension policy, and our Revenue Deferral Plan have  
184 all been very helpful in managing risks. Additionally, in late 2015 PRECorp  
185 was able to revise its Security Deposit regulations in order to be better  
186 positioned to require deposits from existing members who may be  
187 experiencing financial difficulties, but still managing to pay monthly power  
188 bills on time as was the case in the recent coal mine bankruptcies.

189 **Q. Has the Cooperative been able to reduce costs?**

190 A. PRECorp's efforts in anticipating the decline of the CBM sales resulted in  
191 the implementation of various initiatives to increase productivity and reduce  
192 costs for several years. PRECorp has decreased employee headcount  
193 through attrition in the last several years. Staffing levels reached a high of  
194 177 full and part-time employees in 2009 as the CBM exploration and  
195 extraction reached a peak. As of June 2013, the total was 157, and as of  
196 November 2015 is 149. We also maintain an employee program where  
197 employees are encouraged to propose revenue enhancement and expense  
198 reduction ideas for the cooperative to implement. PRECorp tracks the  
199 impacts of these initiatives each year and since 2010 the PRECorp team  
200 has delivered \$5,728,181.84 in value to the members through cost savings  
201 and revenue enhancements; see Exhibit ME-4.

202 **Q. Are there increased labor and benefit costs in the adjusted test year  
203 used to determine cost of service?**

204 A. Labor costs have been increased 3% as of October 2015 to reflect  
205 increases needed to keep PRECorp's compensation plan competitive with

206 other cooperatives on a national benchmark for our non-union employees  
207 and to comply with terms negotiated in our union contract.

208 Wages and benefits are a significant portion of PRECorp's operational costs  
209 and the Board is actively engaged in reviewing the size of the work force  
210 and its wage and benefit levels. We have focused on using normal attrition  
211 to keep our workforce aligned with our desired service levels and required  
212 activities, and we continued to shift a higher percentage of healthcare costs  
213 to the employees.

214 In 2015 the average increase in health care premium cost to the employee  
215 was offset by the wage increase. While the cost to the company was almost  
216 neutral, the higher premiums for the employees are designed to reduce  
217 overall usage and ultimately overall premium costs to both the employer  
218 and the employee.

219 David Hedrick will provide additional details of increased operational costs  
220 included in the Cost of Service Study.

221 **Q. Please expand upon the Revenue Deferral Plan mentioned previously**  
222 **as being helpful in managing risks.**

223 A. In 2009, the Cooperative put into place a Revenue Deferral Plan, with  
224 approval from RUS to manage the risks related to unforeseen and  
225 extraordinary expenses related to the 2008 Economic Crisis and its impact  
226 on the capitalization of retirement plan PRECorp participates in. At that time  
227 there was real risk of PRECorp, and other cooperatives, being required to  
228 make a Deficit Reduction Contribution to provide additional capital into the  
229 RUS plan to make up for losses. As the risk abated, PRECorp realized the

230 value of the Revenue Deferral Plan as a means to help stabilize end of year  
231 financials and associated revenues without placing any addition burden on  
232 members.

233 This Revenue Deferral Plan was part of the last two general rate filings  
234 PRECorp made in 2010 (Docket No. 10014-118-CR-10) and 2013 (Docket  
235 No. 10014-145-CR-13), and was created to provide a degree of planning  
236 flexibility and a cushion against unexpected revenue and expense impacts.  
237 The current balance of the Revenue Deferral Plan is \$7.22 million, though  
238 we anticipate that we will utilize an amount as necessary in our 2015 final  
239 financial results in order to meet our minimum RUS OTIER requirement.  
240 Exhibit ME-5 includes copies of the current Revenue Deferral Plan, the  
241 Board resolution adopting the plan, and the RUS approval letter. A new  
242 Plan will be developed after the results of 2015 are known and an amount  
243 of deferred revenue is applied from the Plan.

244 **Q. Do the proposed rates reflect the utilization of revenue from the**  
245 **Deferred Revenue Plan?**

246 A. The 2015 operating budget was projected to utilize \$2,350,000 of revenues  
247 from the Plan in order to produce a positive operating margin that meets the  
248 Cooperative's financial ratio requirements. However, the Board determined  
249 that this rate case should develop sufficient revenues without the use of the  
250 Revenue Deferral Plan to produce adequate margins and RUS OTIER  
251 results in the future to fully support PRECorp's financial stability without the  
252 use of revenue deferral. Any remaining amount of revenue in the Plan

253 would then continue to be available for unexpected or one time events that  
254 impact the Cooperative and ultimately its financial ratios.

255 **Q. With respect to the CBM Line Extension Policy, please explain what**  
256 **other policies and procedures were adopted to reduce the**  
257 **Cooperative's exposure to capital investment risks.**

258 A. The previous version of our CBM Line Extension Policy, applicable to our  
259 CBM customers, included a three (3) mill per kWh surcharge which created  
260 a Cost of Retirement Fund to pay for the eventual retirement of  
261 infrastructure built solely to serve CBM customers. This fund protected the  
262 rest of the membership from bearing the significant cost to retire plant built  
263 for the benefit of one group of customers. In the revised CBM Line  
264 Extension Policy, effective June 2009, the three (3) mill surcharge was  
265 suspended and a five (5) mill surcharge instituted. The five (5) mill  
266 surcharge funded the construction of substations, transmission lines and  
267 system improvements necessary to serve the CBM customer class, not  
268 specific line extensions. Through the five (5) mill surcharge, CBM  
269 customers provided funding necessary to build plant which only benefits the  
270 class, and further relieves the other rate classes of some of the risks  
271 inherent in serving the CBM industry. Individual CBM customers still  
272 provided the capital to build line extensions to provide power to their well  
273 locations. The 5 mill surcharge was ended in September 2012, in response  
274 to the fact that the industry was no longer asking for new loads and  
275 additional capital investment. The surcharge financed \$18,221,268 of  
276 capital infrastructure before it ended.

277 **Q. Can you elaborate on the CBM Risk Management Fund?**

278 A. In some past years, PRECorp has received bill credits from Basin Electric  
279 Power Cooperative. PRECorp handled these credits, when available, in  
280 different ways. In one year, the entire amount of the credit was retained  
281 and added additional operating margins. On other occasions the credit was  
282 extended to the membership through bill credits or checks. In 2007,  
283 PRECorp received a credit of \$4,769,945.32 from Basin. The credit was  
284 allocated to the customer classes, and the amount allocated to the CBM  
285 classes, \$1,596,284.02, was retained and used to establish the CBM Risk  
286 Management Fund, while the remainder was distributed to the non-CBM  
287 rate classes. The Risk Management Fund is intended to offset any stranded  
288 investment the Cooperative might have related to the CBM industry. In  
289 2008, PRECorp again received a credit from Basin of \$4,879,178.97, which  
290 was treated the same way, as a refund to the non-CBM classes and as an  
291 addition to the CBM Risk Management Fund in the amount of  
292 \$2,030,098.40. The last addition to the CBM Risk Management Fund of  
293 \$2,788,751.37 was made in 2009, from a total Basin credit of  
294 \$8,446,198.25. The CBM Risk Management funds earns interest, which is  
295 accrued to the benefit of the fund, and the total value of the fund was over  
296 \$6.6 million as of November 30, 2015.

297 **Q. Are the year to date operating results consistent with the projected**  
298 **results in the 2015 operating budget?**

299 A. Projected PRECorp year to date sales and expenses through the end of  
300 2015 are all under budget. The 2015 Budget projected a decline in total

301 sales as of 2015 year end of approximately 0.2% system wide. The year to  
302 date actual and project December 2015 decline for the system is 4.2%. The  
303 combined CBM rate classes are projected to be down by 11.2%, against a  
304 2015 budgeted decrease of 11.6%. The LPT-Coal class sales were  
305 budgeted to have declined 0.6% through year end, and in fact are down  
306 4.2%. The energy industry continues to face significant economic and  
307 political headwinds. For example, one member of the LPT-Coal class  
308 declared bankruptcy this summer, and has a prepetition debt of \$560,000  
309 outstanding. The CBM classes were singularly impacted this year by the  
310 disconnection of 488 services in the LP-CBM and GS-CBM classes, all held  
311 by one member, which was accompanied by an uncollected account  
312 balance of almost \$1.1 million. The loss of the sales related to those 488  
313 services certainly will continue to impact the actual to budget performance  
314 of the CBM rate classes through year end. PRECorp is and will continue to  
315 monitor its total sales in relation to its actual sales as this rate case  
316 progresses, and is prepared to amend its filing as the sales data develops  
317 for the entirety of 2015.

318 **Q. Why does PRECorp propose to rebase its rates and reset its COPA at**  
319 **this time?**

320 A. The Cooperative uses the COPA to pass through changes in PRECorp's  
321 wholesale power costs to its customers. The COPA amount expected for  
322 2016 is \$11,308,464. The COPA derives revenues to offset power costs  
323 through a per kWh rate adder. Members who have a higher than average  
324 load factor in a class may pay a percentage of the wholesale power cost

325 increases when both demand and energy cost increases are collected on  
326 the basis of kWh sales. Rebasement the rates and zeroing out the COPA factor  
327 is a way to keep members' rates closer to cost of service. The Board  
328 therefore decided it would be appropriate to reset our COPA to zero and  
329 rebase our base rates to reflect Basin's 2016 wholesale rates.

330 **Q. Were any specific Commission directives taken into account when**  
331 **developing this rate case?**

332 In the Commission's Order in Docket No. 10014-82-CR-05, issued July 17,  
333 2006, PRECorp was directed to "develop a plan to bring all customers to  
334 cost of service, particularly seasonal and irrigation customers." The rate  
335 case contemplates an increase for the irrigation class that is consistent with  
336 this directive. In addition to that directive, in the Commission's order in  
337 Docket No. 10014-145-CR-13, issued June 19, 2014, the Commissioners  
338 stated that the Cooperative was expected to propose more movement  
339 between customer charges, demand charges and energy charges. The  
340 distribution of the recovery of costs between these charges was a  
341 substantial topic during the proceedings of that docket. This filing continues  
342 to adjust those charges consistent with Commission guidance and is more  
343 fully explained by David Hedrick.

344 Additionally, the LPT General filing to create the LPT General Rate was  
345 docket number 100012-156-CT-14 and the order stated "PRECorp is  
346 directed to file its cost of service studies upon completion, whether or not  
347 the Cooperative files a general rate case." This filing also addresses that  
348 order with the filing of the cost of service study.

349 **Q. Does Mr. Hedrick provide a detailed examination of the rate design**  
350 **used to move the rates of return of the customer classes toward cost**  
351 **of service, in addition to describing changes to basic charges,**  
352 **horsepower charges for the irrigation rate and other changes?**

353 A. Yes.

354 **Q. Has this filing been approved by PRECorp's Board of Directors?**

355 A. Yes, the Board approved the rate filing on November 17, 2015.

356 **Q. When does PRECorp request the rates proposed in this filing become**  
357 **effective?**

358 A. PRECorp is requesting the rates proposed in this filing be approved and  
359 placed into effect for all customer billing dates no later than January 10,  
360 2017.

361 **Q. Does this conclude your testimony?**

362 A. Yes, it does.
