FILED
LIC SERVICE COMMISSION
OF WYOMING

OCT 18 2019

BEFORE THE WYOMING PUBLIC SERVICE COMMISSION

IN THE MATTER OF THE APPLICATION OF) DOCKET NO. 10014-202-CR-19
POWDER RIVER ENERGY CORPORATION) (Record No. _____)
FOR AUTHORITY TO IMPLEMENT A)
GENERAL RATE INCREASE OF \$7,030,045)
PER ANNUM AND REVISE TARIFFS)

**DIRECT TESTIMONY
OF
DAVID W. HEDRICK
C. H. GUERNSEY & COMPANY
OKLAHOMA CITY, OKLAHOMA
ON BEHALF OF
POWDER RIVER ENERGY CORPORATION**

10 A. I earned a Bachelor of Science degree from the University of Central Oklahoma and a
11 M.B.A. degree from Oklahoma City University. I have been employed by C. H.
12 Guernsey & Company since 1981.

13 Q. **Have you previously testified before regulatory commissions?**

14 A. Yes. I have testified and been accepted as an expert witness before the Arizona
15 Corporation Commission, the Public Utility Commission of Texas, the Oklahoma
16 Corporation Commission, the Arkansas Public Service Commission, and the Wyoming
17 Public Service Commission. Exhibit DWH-1 is my resume, which provides details
18 regarding my clients and experience.

19 Q. **Whom do you represent in this proceeding?**

20 A. I represent Powder River Energy Corporation (“PRECorp” or the “Cooperative”).

21 Q. **Have you previously represented PRECorp in proceedings before the Wyoming
22 Public Service Commission?**

23 A. Yes. I have represented PRECorp in numerous rate filings and Cost of Power Adjustment
24 (COPA) filings over the past thirty years.

25 Q. **What is the purpose of your testimony?**

26 A. I will describe PRECorp’s request and sponsor the schedules included in the rate filing in
27 support of the request. Exhibit DWH-2 is the Rate Analysis and Cost of Service Study.

28 Q. **What are PRECorp’s proposed tariffs designed to accomplish?**

29 A. PRECorp’s proposed tariffs have been designed to accomplish the following goals:

30 1. An increase in system revenue of \$7,030,045, or 4.23%, to result in a target
31 revenue requirement of \$174,464,583.

- 32 2. Restatement of the base cost of power in the COPA mechanism to reflect the
33 current level of power cost.
- 34 3. Revision of the existing base rates to reflect the appropriate recovery of COPA
35 revenue based on the restated base cost of power.
- 36 4. Revisions to rate class tariff charges to recognize changes in the cost of providing
37 service.
- 38 5. Reintegration of the remaining customers served on the General Service-Coal Bed
39 Methane (GS-CBM) rate into the General Service (GS) rate.
- 40 6. Reintegration of the remaining customers served on the Large Power-Coal Bed
41 Methane (LP-CBM) rate into the Large Power (LP) rate.
- 42 7. Closing the existing Residential Time-of-Day (TOD) rate to new customers.
- 43 8. Moving Seasonal service annual billing to monthly billing.
- 44 9. Establishment of new tariffs for the following:
- 45 (a) Residential Time-of-Use (TOU)
- 46 (b) General Service TOU
- 47 (c) Large Power TOU
- 48 10. Integration of the Large Power Transmission-General (LPT-G) rate into the new
49 Large Power TOU rate.
- 50 11. Reflect a change in the revenue requirement for the Large Power Transmission
51 Coal Mine (LPT-CM) rate utilizing the rate design as requested in Docket No.
52 10014-198-CT-19. After the completion of the schedules for this rate filing, the
53 proposed change in the LPT-CM rate design requested in Docket No. 10014-198-

54 CT-19 was approved. I have included in my testimony a discussion of the impact
55 of this approval on the rate filing.

56 **Q. What criteria were used to establish the proposed target revenue requirement?**

57 A. As a not-for-profit electric cooperative, PRECorp's required revenue is determined based
58 on: (1) the cash requirements necessary to meet the Cooperative's financial objectives;
59 and (2) the ability to satisfy lender mandated coverage requirements.

60 **Q. What components shown on the income statement, Schedule A-1.0, determine the
61 target revenue requirement of \$174,464,583?**

62 A. The target revenue requirement is the sum of the operating expenses of \$159,317,810 and
63 the return of \$15,146,773. The return is the sum of the interest expense of \$7,171,108
64 and the target operating margin of \$7,975,665.

65 **Q. How was the operating margin determined?**

66 A. The target operating margin was set at a level sufficient to produce a target RUS OTIER
67 of 2.25.

68 **Q. What is the rate change, or proposed increase in system revenue, required to meet
69 the target RUS OTIER of 2.25?**

70 A. The rate change required to meet the target RUS OTIER of 2.25 is \$8,421,248, or a
71 5.07% increase compared to the adjusted test year.

72 **Q. What is the rate change that PRECorp is requesting?**

73 A. The proposed rate change PRECorp is requesting is \$7,030,045, or 4.23% compared to
74 the adjusted test year. Thus, PRECorp is requesting less of a proposed rate change than
75 required to meet the target RUS OTIER of 2.25.

76 **Q. Why is PRECorp's proposed rate change less than the target rate change?**

77 A. The proposed rate change of \$7,030,045 in column (f) of Schedule A-1.0 reflects a
78 reduced level of revenue resulting from the reintegration of the GS-CBM rate class with
79 the GS rate class and the LP-CBM rate class with the LP rate class. Specifically, under
80 PRECorp's proposal to reintegrate the CBM rate classes, customers currently being
81 served on the GS-CBM rate will be served on the proposed GS rate and customers on the
82 LP-CBM rate will be served on the proposed LP rate.

83 The proposed GS and LP rates were developed based on achieving a relative rate of
84 return (RROR) of 1.00 for the existing GS and LP classes as reflected in the cost of
85 service study. The proposed GS and LP rates, when applied to the former GS-CBM and
86 LP-CBM customers, produce a lower level of revenue for the combined classes than what
87 would be justified if the CBM classes remained as stand-alone rate classes. PRECorp
88 chose not to request the increase in revenue necessary to bring the combined classes to a
89 RROR of 1.00. The intent of PRECorp's chosen approach is to not create any additional
90 burden on existing GS and LP customers as a result of reintegrating the GS-CBM and
91 LP-CBM customers into those rate classes.

92 Q. **How have the adjusted operating revenues and operating expenses been determined
93 in PRECorp's rate filing package?**

94 A. The operating revenues and operating expenses have been developed based on an actual
95 historical twelve-month test period ending December 31, 2018 and adjusted for known
96 and measurable changes. The known and measurable changes reflected in the adjusted
97 test year include:

98 1. Adjustment of test-year base revenue. The adjusted test year revenue has been
99 developed based on the application of the existing rates to the adjusted test year

100 billing units. The most significant change in the billing units is to reflect the
101 continued decline in sales to CBM rate classes and the loss of two Large Power
102 Transmission Coal Mine (LPT-CM) customers.

103 2. Adjustment to reflect the revenue to be billed under the COPA based on the
104 adjusted wholesale power cost and adjusted billing units.

105 3. Adjustment to reflect the projected change in Regional Transmission Service
106 Revenues.

107 4. Adjustment to reflect the current wholesale cost of power (purchased power)
108 applied to the adjusted test year billing units.

109 5. Adjustments to reflect the 2019 cost for payroll and benefits expenses and
110 associated payroll taxes.

111 6. Adjustment to reflect the change in property taxes.

112 7. Adjustment to reflect the change in depreciation expense.

113 8. Adjustments to reflect changes in Interest on Long-Term Debt, Interest on
114 Customer Deposits, and Other Deductions.

115 I will discuss the development of the adjustments individually.

116 **Adjustments to Test Year and Development of Revenue Requirement**

117 Q. Please describe the development of the adjustment to test year base revenue of
118 negative \$12,127,411 shown in column (b) of Schedule A-1.0.

119 A. The adjustment is calculated on Schedule A-4.0 and represents the difference between the
120 adjusted test year base revenue and the actual test year base revenue. The adjusted test
121 year revenue is calculated on Schedule F-4.0 by applying the currently authorized rates to
122 the adjusted billing units for each rate class. The adjusted billing units were developed

123 based on actual data for January through July of 2019 and budget/forecast billing units
124 for August through December 2019. The budget billing units for the LPT-CM class have
125 been further reduced to exclude two coal mine loads that ceased operation in mid-2019.
126 The adjustment to reduce revenue using the adjusted billing units reflects the continued
127 decline in CBM and coal mine load.

128 **Q. Please describe the development of the adjustment to the test year COPA revenue of**
129 **negative \$1,715,908 shown in column (b) of Schedule A-1.0.**

130 A. The adjustment is calculated on Schedule A-4.0 and represents the difference between the
131 adjusted test year COPA revenue and the actual test year COPA revenue. The adjusted
132 test year COPA revenue is calculated on Schedule F-5.0. The calculation of adjusted
133 COPA revenue has been developed based on the currently approved COPA tariff using
134 the adjusted test year wholesale power cost on Schedules G-2.0 through G-2.4. The
135 adjusted COPA revenue reflects a full recovery of the recoverable power cost.

136 **Q. Please describe the development of the adjustment to the Regional Transmission**
137 **Revenues of negative \$164,702 shown in column (b) of Schedule A-1.0.**

138 A. The adjustment reflects the projected reduction in Regional Transmission Revenues
139 received by PRECorp as reflected in the 2019 budget. The Regional Transmission
140 Revenues are projected to be lower as a result of the lower level of use of the
141 transmission system.

142 **Q. Please describe the adjustment to purchased power of negative \$12,887,025 shown**
143 **in column (b) of Schedule A-1.0.**

144 A. The adjustment is calculated on Schedule A-5.0 and represents the difference between the
145 adjusted test year wholesale power cost and the actual test year wholesale power cost.

146 The adjusted wholesale power cost is summarized on Schedule G-2.0 and developed on
147 Schedules G-2.1 through G-2.4. The reduction in power cost reflects the loss of two coal
148 mine loads in mid-2019 and the continued decline of CBM load. The Basin wholesale
149 rate also changed slightly.

150 **Q. Please describe the adjustment made to payroll expense.**

151 A. Payroll expense has been increased by \$307,708 from the actual test year amount. This
152 represents a 4.95% increase in payroll expense compared to the test year. The adjustment
153 is developed on Schedule A-7.0. The adjustment is based on 122 full time and 7 part
154 time employees using current 2019 wage rates. The expense ratio and overtime ratio
155 utilized in the calculation are five-year averages as reflected on Schedule C-6.0.

156 **Q. How is the payroll expense adjustment assigned to the various RUS operating
157 expense accounts?**

158 A. The payroll adjustment is spread to the various expense accounts on Schedule A-3.1
159 based on the test year actual payroll by account.

160 **Q. Please describe the adjustment made to benefits expenses?**

161 A. Benefits expenses have been increased by \$43,179 from the actual test year amount. The
162 adjustment is developed on Schedule A-8.0. The calculation of the adjusted test year
163 benefits expenses is developed on Schedules A-8.1 through A-8.6. The adjusted benefits
164 expenses are based on the 2019 premium and contribution amounts for each benefit. The
165 total adjusted benefits contribution is multiplied by the labor expense ratio to determine
166 the adjusted benefits expense. The labor expense ratio is the five-year average developed
167 on Schedule C-6.1.

168 **Q. How is the benefits expense adjustment assigned to the various RUS operating
169 expense accounts?**

170 A. The benefits adjustment is spread to the various expense accounts on Schedule A-3.2
171 based on the test year actual benefits by account.

172 **Q. Please describe the adjustment to workers compensation insurance and payroll tax
173 expense.**

174 A. Adjusted workers compensation expense is calculated on Schedule A-9.0 based on
175 adjusted test year wages and the current workers compensation premium rate; it is also
176 shown on Schedule A-13.1. Adjusted payroll tax expense is calculated on Schedule A-
177 13.2, A-13.3, and A-13.4 based on the adjusted test year payroll and the appropriate state
178 and federal payroll tax rates. The total adjustment to workers compensation insurance
179 and payroll tax expense is \$20,614 as shown on Schedule A-13.0. The adjustment is
180 spread to the operating expense accounts on Schedule A-3.3.

181 **Q. What level of rate case expense is included in adjusted test year expenses?**

182 A. The test year actual rate case expense in Account 928 of \$156,683 reflects the 2018
183 component of the amortization of the rate case expense of \$467,370 in Docket No.
184 10014-168-CR-16. The rate case expense from Docket No. 10014-168-CR-16 was
185 amortized over 3 years.

186 The level of rate case expense that PRECorp will incur in this proceeding is difficult to
187 predict. The rate case expense will include not only the cost of developing the rate filing
188 package and testimony, but also the post-filing activities, which include responding to
189 interveners, the OCA, and commission staff, as well as preparing for required hearings.
190 The rate case expense for this case has been estimated at \$470,048, which if amortized

191 over a three-year period, equals \$156,683, or the amount amortized during the test year.
192 The resulting adjustment to rate case expense is zero as shown on Schedule A-10.0.

193 **Q. Please describe the adjustment to property tax expense.**

194 A. The adjustment to property tax is an increase of \$20,240. The adjustment is calculated on
195 Schedule A-12.0 by applying the effective property tax rate for the test year to the plant
196 in service at the end of the test year.

197 **Q. Please describe the adjustment to depreciation expenses.**

198 A. The adjustment to depreciation expense is a reduction of \$369,496. The adjustment
199 includes two components. The first component is a reduction in projected depreciation
200 expense as calculated on Schedule A-11.0 by applying the applicable depreciation rates
201 to the test year-end plant balances. The second component is an adjustment to remove
202 the regulatory debits and credits recorded for the test year as shown on Schedule A-14.0.
203 The removal of the regulatory debits and credits eliminates the over/under recovery
204 related to the COPA booked in the test year. The calculation of the adjusted test year
205 COPA provides a full recovery of COPA revenue.

206 **Q. Please describe the adjustment to interest on long-term debt.**

207 A. The adjustment to interest on long-term debt is an increase of \$210,714. The adjustment
208 is calculated on Schedule A-15.0 by applying the applicable interest rate to the adjusted
209 principal outstanding. The adjusted principal outstanding reflects the test year ending
210 outstanding debt less the projected principal payments for 2019.

211 **Q. Please describe the adjustment to interest on customer deposits.**

212 A. The adjustment to interest on customer deposits is an increase of \$157,134 as reflected on
213 Schedule A-16.0. The adjusted test year consumer deposit interest of \$591,815 is

214 calculated by applying the 2019 interest rate of 3.53% to the consumer deposit balance of
215 \$16,765,287 at year end 2018.

216 **Q. Please describe the adjustment to other deductions.**

217 A. The adjustment to other deductions is a reduction of \$138,616 as shown on Schedule A-
218 17.0. The adjustment reflects the removal of all charitable donations from the revenue
219 requirement.

220 **Q. What is the impact of the adjustments to test year revenues and expenses?**

221 A. The adjustments to test year revenues and expenses are shown in column (b) of Schedule
222 A-1.0. The impact of the adjustments is to reduce operating margins by \$1,372,471. The
223 adjusted test year is reflected in column (c) of Schedule A-1.0. The adjusted test year
224 operating margin is negative \$445,583, which produces a RUS OTIER of 0.94.

225 **Cost of Service Study**

226 **Q. Was the Cost of Service Study included with the rate filing developed using the same
227 methodology as proposed by PRECorp and approved by the Commission in
228 previous rate filings?**

229 A. While the fundamental cost of service allocation process is consistent with prior studies,
230 PRECorp has changed the approach used for the allocation of costs to the GS-CBM and
231 LP-CBM rate classes. In prior filings, the cost of service analysis reflected direct
232 assignments of the plant investment placed into service for the GS-CBM and LP-CBM
233 rate classes. The cost of service analysis in this filing does not include direct assignments
234 of plant to the GS-CBM or LP-CBM rate classes, nor is there a recognition of
235 contributions in aid of construction (CIAC) provided by GS-CBM or LP-CBM
236 customers. The plant investment previously directly assigned to the GS-CBM and LP-

237 CBM classes has been included with other similar plant investment and allocated to all
238 rate classes.

239 **Q. What is the reason for this change in methodology?**

240 A. From the beginning of the coal-bed methane development in its service area, PRECorp
241 took steps to safeguard its other members from potential negative impacts related to the
242 provision of service to CBM customers. One of the first steps was to establish separate
243 rate schedules for CBM customers for the purpose of directly assigning costs to the CBM
244 customers and ensuring that those customers paid their share of costs without requiring
245 subsidy from other members. PRECorp implemented other risk mitigation strategies as
246 well, such as accelerated depreciation on certain assets, line extension requirements, and
247 risk management and retirement funds. All of these risk mitigation steps were taken in
248 anticipation that the CBM load would have a 7 – 10-year life and then begin to decline.
249 The decline in the CBM industry and in sales by PRECorp to CBM customers has been
250 well documented and continues. Budgeted annual kWh sales to the GS-CBM customers
251 in this filing have declined by roughly 27.8 million kWh, or 57%, from the projected kWh
252 sales in the last rate filing. Budgeted annual kWh sales to the LP-CBM customers
253 in this filing have declined by roughly 201 million kWh, or 49%, from the projected kWh
254 sales in the last rate filing. It is anticipated that service to CBM related load will continue
255 to decline into the future.
256 As such, PRECorp believes that it is now appropriate to reintegrate the CBM customers
257 back into the respective rate class where service would be provided absent the separate
258 CBM rate classes. Absent such reintegration, as the existing CBM rate classes continue
259 to shrink in sales, the recovery of all costs related to directly assigned facilities will result

260 in rates for the remaining CBM customers that are not sustainable. At the point when
261 substantive sales to CBM customers cease, the cost of facilities built to serve CBM load
262 will either become stranded or will be absorbed by the other customers of the
263 Cooperative. Eliminating the GS-CBM and LP-CBM rate classes at this time provides a
264 smoother transition than waiting until all of the customers in the CBM classes have
265 ceased operations.

266 **Q. Did the Commission provide direction regarding certain allocation methods
267 employed by PRECorp to be addressed in this proceeding?**

268 A. Yes. The following findings of fact from the final order in Docket No. 10014-168-CR-16
269 provide the necessary background for discussion.

270 47. The fourth argument is that PRECorp should modify its long-standing use
271 of the 12 CP Method for allocation of a number of costs. We find that Hedrick
272 has carried PRECorp's burden to explain the choice of the 12 CP method, and are
273 not persuaded by the merits of the alternative proposed by Higgins.
274

275 48. As an independent reason for finding in favor of PRECorp on the 12 CP
276 issue, and also with respect to the first allocation issue, we consider it wise during
277 this period of economic instability to avoid changes in method which would
278 substantially cloud the ability of all members to understand how the challenges
279 facing PRECorp will affect them. Moreover, there is no question that the changes
280 proposed by Carbon Creek would directly benefit the CBM class, to the detriment
281 of other classes. There is no question that the use of the 12 CP method has for
282 many years been an operating premise of PRECorp, its board, its members, and
283 this Commission.
284

285 49. By supporting the use of the 12 CP method in this case and under these
286 circumstances, we do not foreclose the possibility that the changes now engulfing
287 PRECorp may eventually warrant a re-evaluation of its allocation method. But
288 we are not persuaded now is the time. Given the evident commitment of
289 PRECorp witnesses to the 12 CP method, we cannot believe it would be fruitful to
290 order a collaborative to address this issue. However, we urge PRECorp to reflect
291 in good faith on the matter of the 12 CP method, in light of other alternatives, and
292 to be prepared to address this issue in its next rate case, whenever that may be.
293

294 **Q. Has PRECorp considered the appropriateness of its continued use of the 12 CP
295 method for allocation of demand related costs?**

296 A. Yes. As reflected in the findings of fact, the 12 Coincident Peak (12 CP) method for
297 allocation has been utilized by PRECorp and approved by the commission for many
298 years. Nevertheless, PRECorp considered whether another method was more
299 appropriate. Ultimately, PRECorp concluded that the 12 CP method remained the best
300 method for PRECorp to use.

301 The compelling underlying reason for use of the 12 CP is that this method provides the
302 most accurate means of allocating plant investment and associated costs based on why
303 the plant was built and how the plant is used. The generally accepted practice among
304 state regulators and FERC regulators is to allocate transmission and distribution
305 substation investment using the 12 CP method. The Southwest Power Pool also assigns
306 and recovers transmission costs from its customers based on the 12 CP method.
307 Therefore, in consideration of the appropriate method for allocating transmission and
308 substation investment, the 12 CP method is most widely recognized and practiced.

309 For PRECorp, the majority of line transformer investment is allocated based on the size
310 of the individual transformer serving the customer and the associated costs. Single-phase
311 overhead line extension investment is allocated to single-phase consumers and three-
312 phase overhead line extension is allocated to three-phase consumers. This leaves only the
313 allocation of the overhead distribution backbone line investment and underground
314 backbone distribution line investment based on the 12 CP method in dispute. These
315 facilities are built and utilized to serve the diversified load of all the members using those
316 facilities. That is, the system has been sufficiently designed to serve the load

317 requirements of the cumulative coincident load of all members. Thus, each rate class'
318 contribution to the monthly coincident peak provides the most accurate representation of
319 how these costs should be allocated.

320 The alternative method, the Non-Coincident Peak (NCP) method, would assign demand
321 related costs based on the sum of each individual consumer's maximum metered demand
322 in an annual period regardless of when it occurred. The argument for this method is that
323 the system must be built to a size that is sufficient to serve the maximum possible load of
324 all consumer loads if operating at peak at the same time. This does not align with reality
325 or with how the system is actually designed. More specifically, the system is not built to
326 serve all customers at their maximum demand at the same time. Rather, the system is
327 built to take into account diversity between customers within each rate class and also
328 diversity between rate classes. Not all customers utilize energy on the same schedule or
329 with the same diversity, and thus, an individual customer's demand requirement and
330 consequently the rate class' demand requirement will be quite different. Without
331 recognition of this diversity by use of the 12 CP method, the differences between
332 customers and rate classes is ignored. From a cost causation standpoint, PRECorp
333 believes that the 12 CP method is the most fair and equitable way to assign costs.

334 **Q. Are there other reasons for maintaining the 12 CP method?**

335 A. Yes. As the Commission found in PRECorp's last rate case, changing from the 12 CP
336 method to another method during a time of economic instability could "substantially
337 cloud the ability of all members to understand how the challenges facing PRECorp will
338 affect them." The economic instability that existed during PRECorp's last rate case
339 persists today.

340 Specifically, not only does CBM load continue to decline, coal loads are also declining,
341 and the coal mines that PRECorp serves are operating in a distressed industry. Thus,
342 even if there is a more effective means of allocation than the 12 CP method, PRECorp
343 believes that for this additional reason this is still not the time to change allocation
344 methods due to the decline in billing units and the uncertainty this creates in rate design.
345 Lastly, the implementation of an alternative method of assigning demand would be
346 dependent upon having individual demand data for all customers. PRECorp does not yet
347 have the demand meters in place to provide that type of data in this proceeding, although
348 PRECorp has taken steps towards achieving the ability to obtain individual demand data
349 for all customers.

350 **Q. What are the results of the Cost of Service Study?**

351 A. Schedule H-1.0 summarizes the results of the cost of service study under existing rates.
352 Schedule H-2.0 summarizes the results of the cost of service study under proposed rates.
353 The following table summarizes the rates of return and relative rates of return by class.

	COSS Existing Rates		COSS Proposed Rates		
	ROR	RROR	Actual	RROR	Target
			ROR	RROR	RROR
Residential	3.080%	0.930	7.055%	1.041	0.946
General Service	3.455%	1.043	7.447%	1.099	0.998
General Service CBM	1.724%	0.521	-3.058%	-0.451	-0.410
Total General Service			5.768%	0.851	0.773
Irrigation	5.304%	1.601	7.401%	1.092	0.992
Large Power	3.217%	0.971	7.440%	1.098	0.997
Large Power CBM	4.239%	1.280	5.330%	0.787	0.714
Total Large Power			6.792%	1.003	0.910
LP Trans Coal	3.295%	0.995	7.433%	1.097	0.996
LP Trans CBM	0.251%	0.076	7.219%	1.066	0.968
LP Trans General	0.928%	0.280	5.843%	0.863	0.783
Lighting	7.880%	2.379	8.237%	1.216	1.104
Total System	3.312%	1.000	6.775%	1.000	0.908

354 Target Rate of Return 7.460%

355 Table 1

356 **Q. Do the results reflected in Table 1 indicate a need to adjust rates?**357 A. Yes. Based on the results of the Cost of Service Study under existing rates, adjustments
358 are recommended for all of the rate classes. Schedule N-1.0 reflects the proposed
359 changes by rate class. The proposed changes reflect the following objectives:

- 360 1. Revise the COPA to reflect a recovery based on the current base power cost. The
361 proposed COPA is calculated on Schedule F-5.0.
- 362 2. Achieve the target rate of return for each class and move the RROR toward 1.00
363 relative to the target rate of return.
- 364 3. More specifically, the proposed GS rate and LP rate are designed to move the
365 RROR for the existing GS and LP classes to 1.00 relative to the target rate of
366 return.

367 4. Also, the rate change for the existing GS-CBM and LP-CBM customers is based
368 on the design of the GS and LP rates reflected in #3.

369 **Q. How does the combination of the GS-CBM and LP-CBM rate classes with the GS**
370 **and LP rate classes impact PRECorp's proposed rate change?**

371 A. The proposed rate change, which includes the reintegration of the GS-CBM and LP-CBM
372 rate classes with the GS and LP rate classes in the manner proposed by PRECorp, results
373 in an overall increase of \$7,030,045 in revenue, or 4.23%, which results in a RUS OTIER
374 of 2.03. Achieving the target OTIER of 2.25 would require an overall increase of
375 \$8,421,248 in revenue, or an additional \$1,391,203.

376 **Q. Why has PRECorp chosen the approach of requesting a proposed rate change**
377 **resulting in less than the target revenue?**

378 A. Schedule H-2.0, Page 3 of 3 shows the cost of service results under the proposed rates for
379 the combined GS/GS-CBM class and the combined LP/LP-CBM class. As Schedule H-
380 2.0 illustrates, the combined GS/GS-CBM rate class would require an additional
381 \$560,380 in revenue, or an additional 3.45% increase, to achieve an RROR of 1.00 for
382 the combined GS/GS CBM class. The combined LP/LP CBM class would require an
383 additional \$597,099 in revenue, or an additional 0.93% increase, to achieve an RROR of
384 1.00 for the combined LP/LP CBM class.

385 The reason PRECorp is proposing rates that result in less of an increase than needed to
386 achieve a 1.00 RORR for the GS/GS-CBM class and LP/LP CBM is that the full increase
387 would result in an increase to the existing GS customers of 12.32%, or 3.46% higher than
388 what the cost of service recommends. The full increase to existing LP customers would
389 be 7.1322%, or 0.93% higher than what the cost of service recommends. Thus, both the

390 existing GS and LP customers would require a larger increase than what the cost of
391 service reflects those customers should receive if PRECorp were to propose a full
392 recovery from the combined GS/CBM and LP/CBM classes.

393 PRECorp believes that an appropriate first step is to move the CBM customers into the
394 standard rate schedules. Additional steps may be required in future rate filings to bring
395 the combined rate class to a RROR of 1.00 as reflected in the cost of service at that time.

396 **Q. Please describe the proposed changes for the Residential class.**

397 A. The proposed rates will increase the monthly customer charge from \$25.50 to \$27.00.
398 The Total Customer cost component of \$27.99 is shown on Schedule M-1.0 page 1 of 8.
399 The non-standard 200-amp service customer charge has been increased from \$30.00 to
400 \$31.50. The energy charge has been adjusted to reflect the recovery of costs and the
401 change in the COPA base cost. The proposed increase to this class is 8.87%.

402 **Q. Please describe the proposed changes to the Residential TOD rate.**

403 A. The existing Residential Time Of Day (TOD) rate reflects the same changes in customer
404 charge as the standard Residential rate. The On-peak and Off-peak energy charges have
405 been revised to reflect the appropriate recovery of costs and the change in the COPA base
406 cost. PRECorp is proposing to close the existing Residential TOD rate to new customers.
407 Existing TOD customers will be allowed to continue service on the closed TOD rate. A
408 new Residential Time of Use (TOU) rate has been proposed. The new rate includes the
409 On and Off-peak hours and costs as reflected in the current Basin wholesale rates.

410 **Q. Please describe the changes proposed to the Seasonal service annual billing.**

411 A. Moving the Seasonal service annual billing to monthly billing will eliminate multiple
412 annual bills to accommodate COPA and other rate adjustments and provide members a
413 more accurate picture of their usage throughout the year.

414 **Q. Please describe the changes proposed to the Residential Heat Rate.**

415 A. The Residential Heat Rate has been revised to reflect a \$4 differential relative to the
416 standard Residential rate. In its recent application for approval of a Non-Residential Heat
417 rate, the Cooperative supported a \$4 differential in customer charge. PRECorp is
418 proposing to consolidate the existing Residential Heat Rate with the Non-Residential
419 Heat rate into a single Heat Rate tariff. The provisions of the approved Non-Residential
420 Heat rate would apply to all Heat Rate customers.

421 **Q. Please describe the proposed changes to the Irrigation class.**

422 A. The proposed increase for the class is 5.61%. This level of increase will move the class
423 to a RROR of 0.992 relative to the target rate of return. This effectively brings the
424 irrigation class to the unified ROR. The fixed horsepower charge has been increased
425 from \$22.50 to \$24.50 per horsepower. The combination of the irrigation system demand
426 component of \$15.54 per horsepower and the customer cost component of \$14.23 per
427 horsepower as reflected on Schedule M-1.0, page 1 of 8 equals \$29.77 per horsepower.
428 The proposed change in the horsepower charge moves the rate closer to the cost
429 component of providing service.

430 **Q. Please describe the proposed changes to the existing GS rate class.**

431 A. The proposed basic charge for the existing General Service class is increased from \$35 to
432 \$40 for single-phase and from \$40 to \$45 for three-phase. These charges are still in line
433 with the Total Customer cost component on Schedule M-1.0 of \$45.34. The kWh charge

434 has been modified to rebase the COPA and achieve the total class revenue requirement.
435 The total increase for this class is 8.86%.

436 **Q. Please describe the proposed change for the existing LP Class.**
437 A. The monthly customer charge has been increased from \$175.00 to \$200.00. The monthly
438 demand charges have been increased from \$3.25 to \$3.75 for the first block, and from
439 \$6.25 to \$6.75 for the second block. The kWh charges have been changed to reflect the
440 rebasing of the COPA and to produce an overall 6.20% increase for the class.

441 **Q. Please describe the proposed change for the existing GS-CBM customers moving to
442 the proposed GS rate.**

443 A. The proposed change for the existing GS-CBM customers is a reduction of 10.17%. The
444 existing GS-CBM customers experience a reduction as a result of the reintegration with
445 the GS rate class due to the differential in the existing rates.

446 **Q. Please describe the proposed change for the existing LP-CBM customers moving to
447 the proposed LP rate class.**

448 A. The proposed increase for the LP-CBM customers is 1.30%. The existing LP-CBM
449 customers experience a smaller increase than the existing LP customers as a result of the
450 reintegration due to the differential in the existing rates.

451 **Q. Please describe the proposed change to the LPT-CBM rate class.**

452 A. The LPT-CBM class is currently its own class; PRECorp is not proposing to integrate the
453 LPT-CBM class with any other class, particularly the LPT or LPT General rate classes.
454 PRECorp is proposing to maintain this rate schedule for the five accounts served because
455 service to these loads is sufficiently unique and the loads served are sufficient to support
456 the investments made to provide service. The proposed increase to the LPT-CBM rate

457 class is 3.70%, which results in an RROR of 0.968 relative to the target rate of return.
458 The NCP demand charge has been increased to \$2.85 per NCP kW and the wholesale
459 charges have been revised to reflect the current level of power cost and rebase of the
460 COPA.

461 **Q. Please describe the change proposed for the LPT-CM rate class.**

462 A. The cost of service shows a small increase is needed for this class. The proposed change
463 is 1.57%. This was achieved by an increase in the basic monthly charge from \$1,000 to
464 \$4,900, and an increase in the retail demand charge from \$0.90 to \$1.30. While the
465 increase in customer charge appears significant, the customer charge component
466 represents only 1% of the total billing to the customers in this class. In addition to the
467 changes in the distribution charges, the wholesale demand charge has been revised to
468 reflect billing based on the CP kW billing unit recognizing the rebased COPA.

469 **Q. What is the impact on the rate filing of the Commission's approval of the rate design
470 change in the LPT-CM rate in Docket No. 10014-198-CT-19?**

471 A. There is no impact of the approval of the rate design change. The rate design changes
472 were designed to be revenue neutral and, therefore, have no impact. Exhibit DWH-3
473 provides a comparison of the adjusted test year revenue as calculated in the rate filing
474 with the adjusted test year revenue using the recently approved LPT-CM rate. Both
475 methods result in the same revenue. Exhibit DWH-3.1 is the supporting calculation of
476 the adjusted test year COPA revenue for the LPT-CM rate with the approved base rates
477 and billing units. Exhibit DWH-4 shows that the proposed rate change by rate class is
478 not changed as a result of the approval of the LPT-CM rate design.

479 **Q. Please describe the change proposed for the LPT-G rate class.**

480 A. The proposed change is an increase of \$7,123 or 1.42%. PRECorp is proposing to
481 eliminate the existing LPT-G rate tariff and serve the only customer on that tariff under
482 the new proposed Large Power Time Of Use (TOU) rate at transmission delivery.

483 **Q. What schedule in the rate filing provides the calculation of the proposed rates?**

484 A. Schedule N-2.0 provides the calculation of the adjusted test year revenue and the
485 proposed revenue under the proposed rates for all rate classes. The proposed rates
486 developed on Schedule N-2.0 are reflected in the Proposed Tariffs.

487 **Q. Have billing comparisons been developed for each of the major rate classes?**

488 A. Yes. Section O contains the billing comparisons for each rate class. The billing
489 comparisons provide the calculation of the billing under the existing rate and proposed
490 rate at various usage levels. As reflected on Schedule O-2.0, the change for an average
491 Residential customer using 1,175 kWh per month is an increase of \$11.23 or 8.84%.

492 **Q. Please describe the development of the proposed new Residential TOU rate.**

493 A. Recent changes in the Basin wholesale rate have resulted in revisions to the definition of
494 On-peak and Off-peak hours. The new Residential TOU rate reflects these hours. The
495 Off-peak rate is based on the energy component for the Residential class of \$0.032006
496 plus the system demand component for the Residential class of \$0.0326450 shown on
497 Schedule M-1.0, Page 1. The On-peak charge of \$0.113 per on-peak kWh is designed to
498 recover the equivalent on-peak charges as reflected in the existing Residential TOD rate
499 with a much smaller number of on-peak billing kWh. Under the existing Residential
500 TOD rate, the on-peak hours in May through September plus the hours in June – August
501 (all hours in June – August are on-peak) total 5,998 hours of a total 8,760 hours in the
502 year. Under the definition of on-peak hours in the new proposed rate, there are 4,258 on-

503 peak hours or 70.99% of the existing on-peak hours. The projected on-peak kWh under
504 the new rate are 1,191,501 and the off-peak kWh are 2,092,643. Thus, the most
505 significant benefit of the new Residential TOU rate is there are 1,740 more off-peak
506 hours at the lower off-peak rate for member consumers to use. The on-peak charge that
507 produces a rate equivalent to the proposed TOD rate is 0.1130 per kWh. The proposed
508 on-peak charge is a reasonable estimate to both recover the cost of providing service and
509 to send an appropriate pricing signal to the member consumer.

510 **Q. Please describe the proposed new General Service TOU rate.**

511 A. The General Service TOU rate reflects the same on and off-peak kWh pricing as reflected
512 in the Residential TOU rate. The customer charges are set at the same level as reflected
513 in the standard proposed General Service Rate.

514 **Q. Please describe the proposed new Large Power TOU rate.**

515 A. The proposed new Large Power TOU rate is necessary to provide all commercial and
516 industrial customers access to the on and off-peak pricing signals in the Basin wholesale
517 rate. The distribution component of the rate is based on the cost components on Schedule
518 M-1.0. The customer charge is the same \$200 as for the standard proposed Large Power
519 rate. The demand charge at transmission delivery of \$0.77/per NCP kW is the sum of the
520 Transmission Sub Demand cost component of \$0.45/kW plus the Transmission Line
521 Demand cost component of \$0.29/kW for the LP class shown on Schedule M-1.0, Page 3
522 of 8. The demand charge at Substation Delivery adds the Distribution Sub Demand cost
523 component of \$1.11 for a total charge of \$1.87. Service at Distribution Primary Delivery
524 includes the Distribution Overhead Demand cost component of \$3.53/kW and the
525 Distribution Underground Demand cost component of \$0.57/kW for a total charge of

526 \$6.02/kW. Service at Distribution Secondary Delivery adds in the Distribution Other
527 Demand cost component of \$0.20/kW for a charge of \$6.22/kW.

528 The fixed charge per CP kW in the wholesale rate at transmission delivery is based on the
529 Purchase Power Demand cost component of the LPT-General class shown on Schedule
530 M-1.0, Page 2 of 8. The cost component shown on Schedule M-1.0 for transmission
531 delivery reflects losses of 0.09%. The remaining delivery level charges have been
532 developed based on the charge at transmission delivery adjusted for the appropriate
533 losses. The charge at substation delivery reflects 2% losses. The charge at distribution
534 primary reflects 4.06% losses. The charge at secondary delivery reflects losses of 7.06%.
535 The energy charge in the wholesale rate at transmission delivery is based on the Energy
536 cost component for the LPT-General class shown on Schedule M-1.0, Page 2 of 8. The
537 cost component shown on Schedule M-1.0 for transmission delivery reflects losses of
538 0.09%. The remaining delivery level charges have been developed based on the charge
539 at transmission delivery adjusted for the appropriate losses. The charge at substation
540 delivery reflects 2% losses. The charge at distribution primary reflects 4.06% losses.
541 The charge at secondary delivery reflects losses of 7.06%.

542 Q. **Does this conclude your testimony?**

543 A. Yes, it does.

BEFORE THE WYOMING PUBLIC SERVICE COMMISSION

IN THE MATTER OF THE APPLICATION OF)
POWDER RIVER ENERGY CORPORATION) DOCKET NO. 10014- 202-CR-19
FOR AUTHORITY TO IMPLEMENT A) (Record No. _____)
GENERAL RATE INCREASE OF \$7,030,045)
PER ANNUM AND REVISE TARIFFS)

AFFIDAVIT, OATH AND VERIFICATION OF DAVID W. HEDRICK

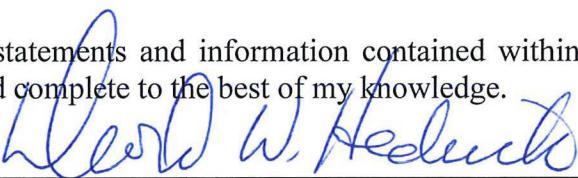

STATE OF OKLAHOMA)
) SS
COUNTY OF OKLAHOMA)

I, David W. Hedrick, being of lawful age and being first duly sworn, hereby state:

1. My name is David W. Hedrick. I am the Executive Vice-President and Manager of the Analytical Services Group at C. H. Guernsey & Company, Engineers, Architects and Consultants. I have been retained by Powder River Energy Corporation to testify in this proceeding on its behalf.

2. Filed with the Wyoming Public Service Commission in the above-captioned proceeding and made a part hereof for all purposes is my direct testimony and exhibits, which have been prepared in written form for introduction into evidence in this proceeding. I have, by all necessary action, been duly authorized to file this testimony and make this Oath and Verification.

3. I hereby verify that all statements and information contained within the direct testimony and its attachments are true and complete to the best of my knowledge.

David W. Hedrick
C. H. Guernsey & Company
5555 North Grand Boulevard
Oklahoma City, OK 73112-5507

The foregoing was acknowledged before me by David W. Hedrick on this 1
day of OCTOBER, 2020, witness my hand an official seal. My commission expires:
10/25/20

S E A L

Notary Public

EXHIBIT DWH-1

DAVID W. HEDRICK – RESUME

EDUCATION:

M.B.A., Oklahoma City University, 1993
B.S., Mathematics, University of Central Oklahoma, 1986

PERTINENT EXPERIENCE:

Mr. Hedrick specializes in the development of revenue requirements, cost of service, rate design, and financial forecasts for retail electric, water, and wastewater utility systems. He is also responsible for the preparation of rate filings and has presented expert testimony before state regulators, including Arizona, Arkansas, Colorado, Oklahoma, Texas and Wyoming. Mr. Hedrick also has extensive experience in the development of wholesale rates and transmission revenue requirements. Mr. Hedrick routinely participates in additional analysis and provides support in areas such as line extension, pole attachment rates, solar and other renewable energy issues, territorial issues and mergers.

As Manager of the Analytical Solutions Group, Mr. Hedrick has oversight of all studies, analyses and filings that are developed by the group. He continues to represent clients before the appropriate regulatory authority and is responsible for the preparation of rate filings and other analytical studies.

SPECIFIC CONSULTING EXPERIENCE:

Acquisitions, Consolidations & Valuation Analysis

Mr. Hedrick has provided analytical support for consolidation studies in Oklahoma, Texas and Wyoming. In addition, he has been involved in the valuation analysis of utility assets for purposes of acquisition and determination of fair market value for clients in Oklahoma and Kansas.

Retail Rate Analysis, Cost of Service Studies, and Line Extension Analysis

Mr. Hedrick's rate analysis and cost of service experience includes the following:

Arizona

- Mohave Electric Cooperative – Regulated by Arizona Corporation Commission
- Navopache Electric Cooperative, Inc. – Regulated by Arizona Corporation Commission

A Fresh Look Analysis and Review of East Kentucky Power Cooperative on behalf of the members of EKPC as directed by the Kentucky Public Service Commission, 2011 -2012

Analysis of community solar resource options including vendor selection and contract negotiations. Development of community solar tariffs and member program agreements.

Testimony on behalf of the Grand Canyon Statewide Association and Sulphur Springs Valley Electric Cooperative in the Value of Solar Docket No. E-00000J-14-0023 before the Arizona Corporation Commission in 2016.

Testimony on behalf of the Texas Electric Cooperative Association in 2017, SOAH Docket No. 473-17-2691, PUC Docket No. 46734, opposing the request of Murphy Oil for the right to receive service from another utility by extension of a private network in contradiction to state law and Public Utility Commission rules.

Testimony on behalf of Northwestern Electric Cooperative in 2017 - 2019, Cause No. PUD201800021, opposing the application of lochem for approval to switch its load to another provider.

Testimony on behalf of CK Energy Electric Cooperative in 2018-2019, Cause No. PUD 201800075, for an order enjoining OG&E from serving or constructing electric facilities to serve and electric consuming facility in violation of the retail electric supplier act.

Testimony on behalf of Oklahoma Association of Electric Cooperatives in its intervention in OG&E's rate filing in 2019, to determine fair and reasonable rates and line extension allowable expenditures for competitive loads.

Education and Training

Mr. Hedrick provides educational seminars and training for cooperative staff and boards of directors, statewide associations, and professional organizations on the topics of Rate Analysis, Cost of Service, Rate Design, Line Extension Policy, and related issues.

Expert Witness

Mr. Hedrick has provided expert testimony related to the development of revenue requirements, cost of service, rate design, and special contract issues in Arizona, Arkansas, Oklahoma, Texas, and Wyoming.

Financial Forecasting & Analysis

Mr. Hedrick prepares and provides training in the development of financial forecast models for electric cooperatives and municipal utility systems.

Software Sales & Support

Mr. Hedrick provided assistance in the development of software for GUERNSEY's 10-year Financial Forecast, Cost of Service, and Financial Performance Analysis programs. Mr. Hedrick is proficient in the use of these software packages and provides support to client users.

Strategic Planning & Analysis

Mr. Hedrick has provided assistance to electric cooperative boards of directors in the development of strategic goals and objectives.

DAVID W. HEDRICK
CHAIRMAN, PRINCIPAL /
MANAGER, ANALYTICAL SOLUTIONS
Page 7 of 7

"Knowledge is Power: Financial Forecasting." Seminar written and presented by Guernsey personnel annually since 2006 in Oklahoma City, Okla. Mr. Hedrick has been a presenter for this seminar numerous times.

"Knowledge is Power: Understanding Rates and Cost of Service." Seminar written and presented by Guernsey personnel annually since 2005, in Oklahoma City, Okla., as well as other locations. Mr. Hedrick has been a presenter numerous times.

"Distributed Generation Net Metering Issues." Written for and presented at *TEC Engineers Association Annual Meeting*. September 2006.

"Net Metering Issues." Written for and presented at *G&T Planners Association Meeting*, Tucson, Arizona, September 2006.

"Development of Distributed Generation Policies and Procedures." Written and presented for *Texas Electric Cooperatives' Managers Meeting*. San Antonio, Texas, December 2, 2004.

"Rate Design in a Restructured Environment." Written and presented for *Texas Electric Cooperatives Accountants Association*. Austin, Texas, April 19, 2000.

EXPERIENCE RECORD:

1981-Present – C. H. Guernsey & Company, Oklahoma City, Oklahoma

- | | |
|---------------|-------------------------------------------------------|
| 2019 -Present | - Chairman of the Board, Principal for Guernsey |
| 2016 – 2019 | - Executive Vice President, Principal for Guernsey |
| 2012 – 2016 | - Sr. Vice President, Principal for Guernsey |
| 2008 – 2012 | - Vice President, Manager, Analytical Solutions Group |
